

AMP Implementation Update Meeting

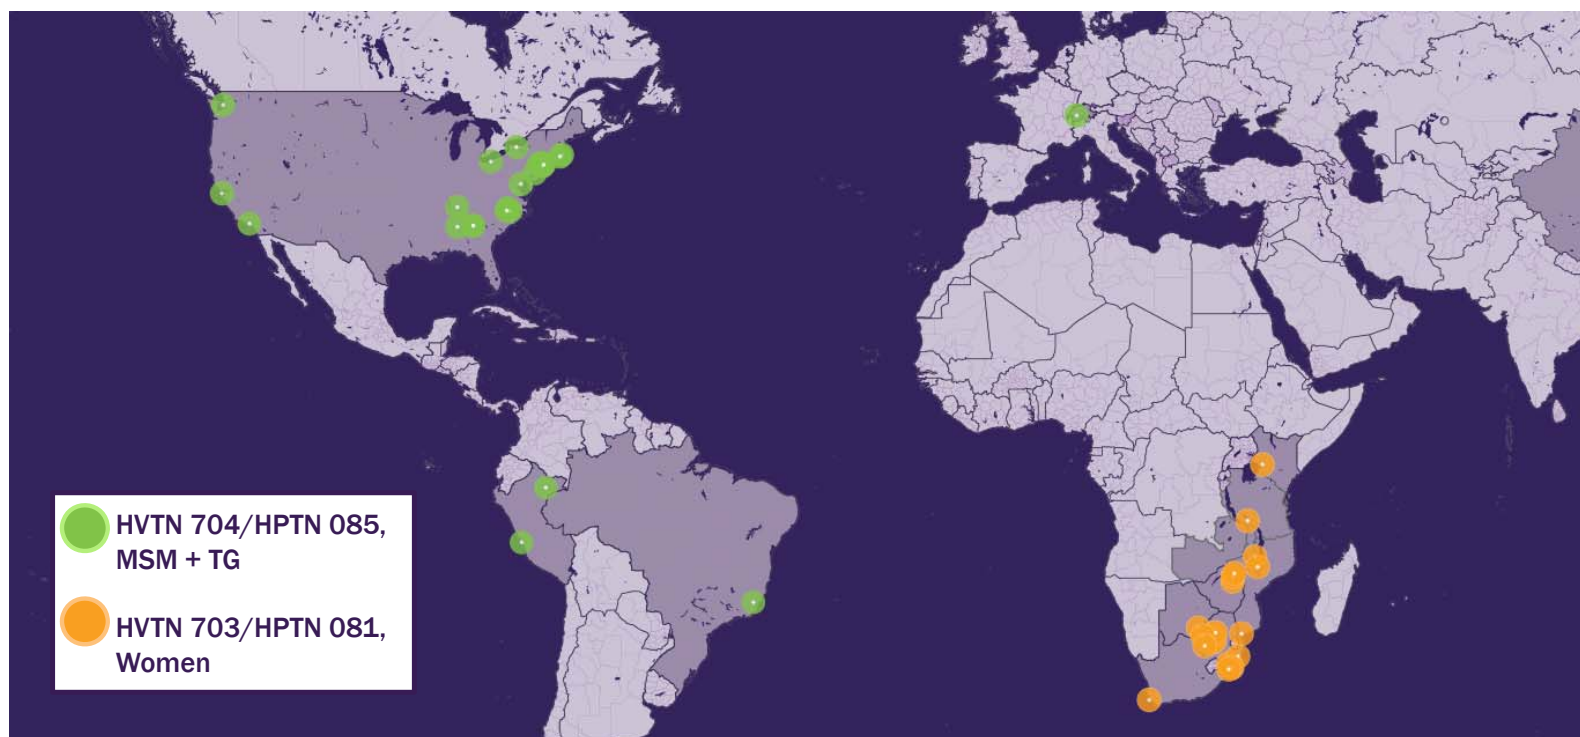

Study Activity and Status

March 2017

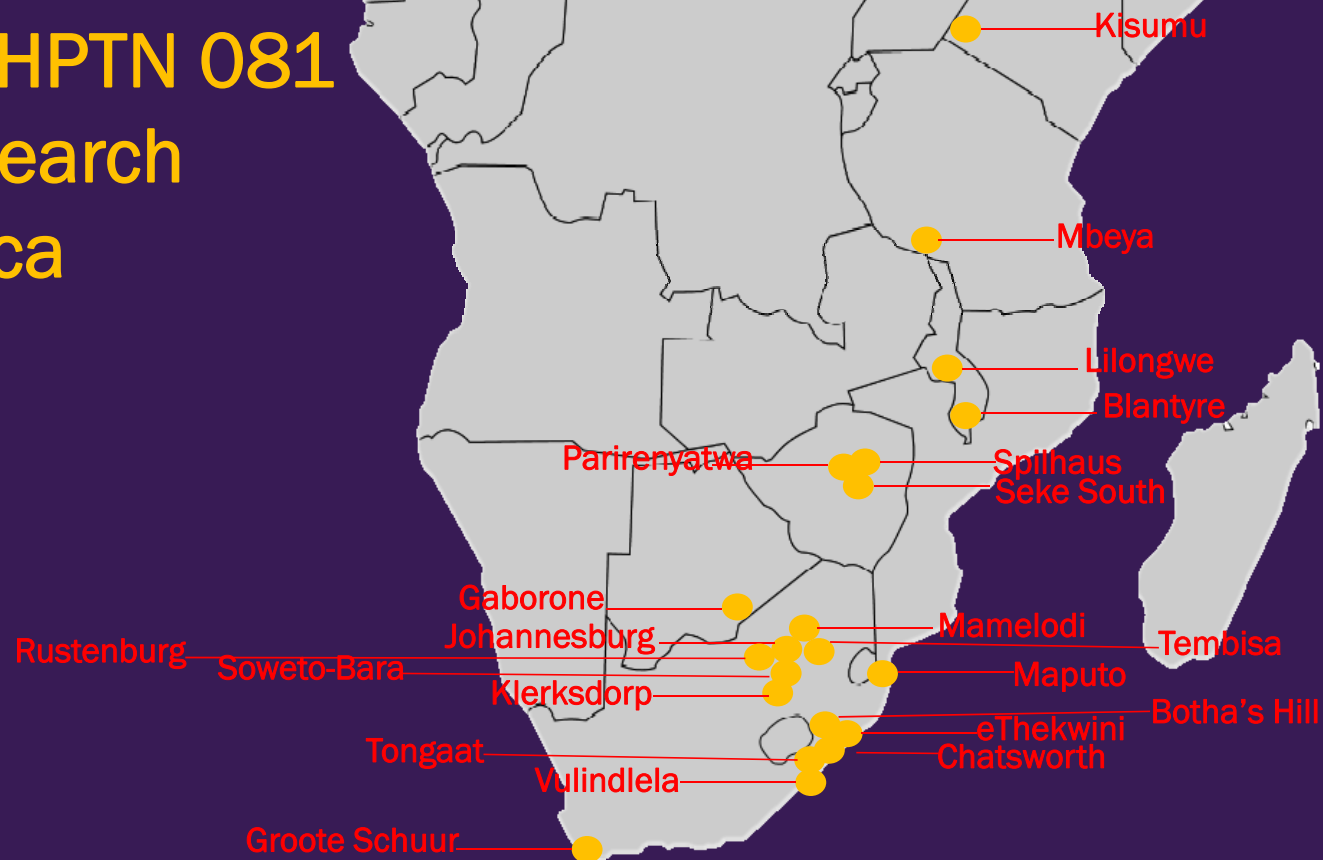

AMP Study Research Sites

(As of February, 2017)

HVTN 703/HPTN 081 Clinical Research Sites in Africa

Enrollment and Retention Updates

703/081
African Women

417
enrolled

96% retention
through 1,644
clinic visits

Adherence to Infusions in HVTN 703/HPTN 081

99.4% of expected
infusions completed
(980 of 986)

Adherence to Infusions Overall in the AMP Studies

**To date across both AMP studies,
3,777 of 3,786 expected infusions
have been given (99.8%).**

Monitoring of the Study

- Protocol Safety Review Team (PSRT) monitors individual safety and adverse events on daily basis
- PSRT evaluates cumulative events twice a month

Monitoring of the Study

- Monitored every 6 months by an independent Data and Safety Monitoring Board (DSMB)
- Evaluates safety, integrity and efficacy of the trial
- Two reviews to date – DSMB has had no concerns about AMP
