WHAT IS THIS ANTIBODY?

This antibody is a broadly neutralizing antibody to HIV. Its name is VRC01. It stops HIV from binding to human T-cells by attaching to the virus and preventing it from infecting the T-cell.

(1) The VRC01 antibody is able to bind onto HIV at the (2) CD4 binding site on the gp120 protein. (3) This neutralizes HIV and prevents HIV from being able to attach to cells and infect them.
